```
}
```

```
confirmEnding('Bastian', 'n');
```

Without comments:

```
function confirmEnding(string,
target) {
  if (string.substr(-
target.length) === target) {
    return true;
  } else {
    return false;
  }
}
confirmEnding('Bastian', 'n');
```

You can use a **ternary operator** as a
shortcut for the if statement:

```
(string.substr(-target.length)
=== target) ? true : false;
```
